

## Time to change again?

Yes No

- Do you have your logistics under control?
- Are supply- and retention times of material as short as possible?
- Are the supply- removal ways as short as possible?
- Do you consequently follow FiFo or LiFo principle?
- Are your workstations designed ergonomically?

..... **At least one no? Then you are right with us!**

## Flexibel and mobil – the Flowbox!

### The flexible shelf

With the new **Rollex** system Flowbox you always adapt your production- and/or consignment area to the current requirements. You automatically consider modern Kaizen and Lean management philosophies.

No matter if many articles for few orders or few articles for many orders – with the possibility of the flexible organization of the Flowbox you realize the stocks of optimal quantities directly at the manufacturing or consignment area.

When planning the Flowbox shelf an ergonomically arranged working environment can be considered and converted.

A further advantage is the mobility of the entire Flowbox shelf. The assembly of the Flowbox can be done at another place (for example in the stock area) than the removal (for example at the machine).

# From the requirement to the Flowbox shelf

After admission of your user-specific requirements we design your individual Flowbox shelf and send you an offer. We take simple, recurring standard construction units and combine them accordingly in each case. So nearly any geometry can be produced in shortest time by means of construction kits. After your release the construction units of your Flowbox will be produced, arranged and delivered with an understandable construction manual.

So we can keep the planning- and production costs for your individual solution on a standard level and we can offer a trend-setting and expandable system for your workstations.

## Contact us!

Re your requirements and wishes we offer your individual Flowbox-solution. Order our storage catalog today. **And ask us – we would like to help you!**

The **Rollex** Group ranks among the internationally leading suppliers of conveyor components. With more than 100 coworkers at the enterprise seat in Werne (Nordrhein-Westfalen) and the location Ebersdorf (Thüringen) as well as in further production locations and addresses world-wide for more than 35 years conveyor elements and components of dynamic storage engineering are manufactured.
